LEADER IN SUSTAINABILITY

PWM is the first airport in the United States to use 100% Recycled Aircraft De-Icing Fluid. By capturing sprayed de-icing fluid and processing it to be used again, PWM is no longer trucking de-icing fluid in from offsite.

PWM was the second commercial airport in the U.S. to attain LEED (Leadership in Energy and Environmental Design) Gold Certification from the U.S. Green Building Council.

PWM has a solar array on the top level of the parking garage. Over a 12 month period to array produces enough electricity to power the entire parking garage operation.
